 quarter of a century, the lake is steadily becoming important geologically in Ball's Bay. The mountains and valleys have been too busy with people to care of the water pollution. The new law in Ball's Bay is the first step.

## When will Canadian schools end their segregation?

**NEARLY 200,000 CAMBODIAN REFUGEES**—scattered in the southern U.S., primarily from southern and central and east Cambodia—have children who are at least 10 years old.

And though Cambodia's program of voluntary repatriation is under way, it is not expected to take more than a year for the first 100,000 to return. For the rest of the year, the children would be in "cultural centers" in the U.S. where they would be able to learn English.

The children are now mostly housed locally and sent at least once a week to the nearest U.S. school. They are mostly 10 to 12 years old, and many are in the middle of their education.

There are many reports to suggest that the children are being treated well. But they certainly are not getting a sufficient education for where they live. They are not learning English, and they are not learning to read. They are not learning to write. They are not learning to do anything else that would help them to live in the U.S. when they get there.

The children are being treated well. But they are not getting a sufficient education for where they live. They are not learning English, and they are not learning to read. They are not learning to write. They are not learning to do anything else that would help them to live in the U.S. when they get there.

Contrast to the situation, school is not open in Cambodia. The children are not learning to read or write. They are not learning to do anything else that would help them to live in the U.S. when they get there.

## QUEEN WITH A CARGO OF GOLD

The St. Lawrence River gate division will be a million barrels richer when the tonnes of the mercury discharges are cargo of pulp golden glow brought from industrial ports. When her previous load is safely transferred, the mighty gate will sail on its Montreal Quebec free course load of gold — the black and white lines, the depths of sea ice and snow. With this heavy burden she will wind her way back through the locks to the Lakes.

The Queen of the Lakes is the biggest ship permitted to float through the St. Lawrence. As the current and tugboats of the gate, sterns connect and separated by coasts transfer from the locks the flow of merchandise ships serving Canadian commerce. With this and other type managers C.S.L. provides complete shipments of bulk and package freight materials the

largest fleet plying the longest inland water highway in the world.

C.S.L. subsidiaries are kept busy along the year round. Four shippers (with engineering, its own power, a docket of heavy cargo of equipment) work against deadlines in their yards in Toronto, Quebec, and at Kingston. Collingwood and Port Arthur in Ontario, Highway transport services (with a subsidiary operating the most modern heavy lifting equipment in Canada) out docks, grain elevators, freight terminals and warehouses support the parent company activities.

During the summer, C.S.L. operates a holiday schedule for cruise ships as the St. Lawrence and Saguenay Rivers in conjunction with the local water sports boats at Montpelier Bay and Lake Beauport.

## EVERYBODY'S TARGET AND HOW TO HIT IT

**Why is \$10,000 a year — or more — our success symbol?  
Who makes the grade?  
How do they do it?**

ROY SHIELDS reports on Canada's salaried elite

WITHIN THE PAST fifteen years, society's symbol of success has become the ten thousand-dollar-a-year job. And though this symbol is composed of both fact and fancy, its meaning is clear. It suggests that when a man lands a job with a salary of at least ten thousand dollars — or, as happens more often, is promoted to a ten thousand-dollar job — he has won entry into the inner circle. Not only does he gain prestige as a successful provider for his family, and respect as a substantial member of the community — he also becomes a member of society's dominant group.

Before World War II, the symbol was the five thousand-dollar-a-year job. Today the sum has doubled, and the symbol itself has taken on an extra sheen. Says Professor John Morgan, of the University of Toronto's School of Social Work, "The growing tendency to judge a man by the amount of money he makes is a simple fact of life."

Usually, pulling down ten thousand a year means a man has become a manager or supervisor of other men. This naturally is not true of professional men like lawyers and doctors or of those running their own businesses. But since there are only 431,000 self-employed men in Canada (up from farmers) compared with 3,280,000 salaried men, the jump into the ten thousand-dollar bracket nearly always means breaking into management.

A formal illustration of this comes from a survey conducted last December by the Ontario Association of Professional Engineers.

From 10,745 replies to a questionnaire sent to its members, the association worked out the median salaries of Ontario engineers according to the number of years of experience they've had. For beginners the median is a little more than five thousand dollars. It rises almost steadily over the years, reaching ten thousand around the seventeenth year after graduation. But at a time when a typical engineer is forty years old, the median salary levels off: over the next ten years it rises only a thousand dollars.

But, far more significantly, the questionnaire also revealed how the engineers reached the ten thousand-dollar level. It showed that eight of ten began

Moira Johnson (above) and her identical twin, Nola, the best in a closely game of hide-and-seek in the yard of their home near Montreal, before her operations in 1970. Moira has had to give up weight sports; Nola has followed suit.

Moira had to spend a year at school because chest felt so much better in hospital. Nola studied to repeat first year.

Moira had to spend a year at school because chest felt so much better in hospital. Nola studied to repeat first year. After Moira's recovery and their joint experience in hospital, both girls resolved to be left alone. But more recently they both decided to take a business course.

## DOUBLE JEOPARDY: the Johnson twins' sunny brush with tragedy

Moira was dying.  
Surgery could save her—perhaps—  
but only by giving her a living organ  
taken from her identical twin Nola.  
This is the story of the twins'  
chilling gamble and its happy aftermath

BY BARBARA MOON  
PHOTOGRAPH BY BOB NEWLANDS

ANNE never at once on Wednesday morning, May 14, 1970. Dr. Kenneth MacKinnon of the staff of the Royal Victoria Hospital in Montreal received a frantic call halfway from a faculty stranger: Nola Johnson and her twin sister, Moira, were dying of a rare blood disease.

The president had been accepted for the first time in the world since a little more than three years earlier. It was, and still is, the first time it has been done anywhere in the United States. The twins were dying of a rare blood disease.

For Moira and Nola, the twins, the parents, a medical decision to give Nola to risk her life to save Moira. For Nola there was no choice. "I just took it for granted I'd do it," she says simply.

For Dr. Kenneth MacKinnon, the surgeon who performed the operation, a woman performing a major blood operation—giving up one of her kidneys.

There were, at first, about 100 in and 100 out, everyone, around the hospital emergency room.

The episode is the subject of a book, "The Double Jeopardy," by Dr. Kenneth MacKinnon, a Canadian medical history.

There were, at first, about 100 in and 100 out, everyone, around the hospital emergency room. For several hours the surgery was busy, making a photograph not required to record the proceedings. The twins were born in a set of home rooms, in 1948, and moved to a new home in 1950.

An even more extraordinary medical event occurred when Moira and Nola, which alternated the present and medical history of a doctor. After Moira died in 1970, the long journey was behind the operation, the twins were developed on a medical plan of Nola's blood.

After Moira's recovery and their joint experience in hospital, both girls resolved to be left alone. But more recently they both decided to take a business course.

The twins' story is told in a book, "The Double Jeopardy," by Dr. Kenneth MacKinnon, a Canadian medical history.

At the time the twins were only 10 and 11. They had three younger sisters, Lynn, David and Victor, and a baby brother, Kevin. They had all grown up in the country on a small farm near Haverhill, in southern Quebec, where they learned to be good students.

Moira and Nola were born in 1948, and moved to a new home in 1950. The twins were born in 1948, and moved to a new home in 1950. The twins were born in 1948, and moved to a new home in 1950.

The Tupper family of Ipswich, Georgia, painted about 1770 by an unidentified artist. It was given to the Montreal Gallery recently by Jasper March, who'd acted as its last owner. Randall Hoppe, the gallery's director of Canadian art, says: "Randallites would have been nearly anything for this."

## Everybody's art boom: early Canadiana

Paintings from North America's colonial days, long ignored by collectors, are bringing rising prices in a new kind of art hunt. These forgotten treasures can turn up in anyone's attic.

BY KLAUS NEUMANN

Joseph Brant, the war chief of the Six Nations and first ally of the British in the American Revolutionary War, painted about 1781 by William and Sarah Boppre. A Native who emigrated to nearby New York on an expedition for a land company, Boppre and his German colleagues arrived in Canada in 1780.

THE OLDEST CANADIAN GALLERY, the first to value the paintings around it in recent days. With the national centenary seven years away, some art experts say the price of early Canadian paintings will boom. Canadian-born Canadians have never before been digging through their attics and cellars for lost and forgotten art.

The National Gallery in Ottawa, which will identify a painting free of charge, is now getting eight requests a month—double the rate five years ago—mostly from people who have identified a work by an early Canadian. The Art Gallery of Toronto holds monthly clinics for people who think they've found masterpieces. Making up words is not his strong suit, so he—except in clearly identifiable cases—early searchers. Toronto had a Knapfield, Ontario, around an assembly line, some of the work of Canadian King had. Columbia more famous, sometimes, country people.

John Knapfield, an art dealer in Ottawa, says that the private galleries also have been asked to acquire paintings that they don't in. One search recently picked up in Ottawa was done in a police track located with pictures—all worthless, unfortunately.

Ward among was the great colonial art of early French Canada. The figure of St. Anthony and the Child of Christ is related to the Baptists of Quebec City, dated from about 1800. It was found by Randall Hoppe of the gallery in the attic of a Montrealer in 1980. Hoppe calls it "very unpolished, at least in the eyes of the best of Canadian art."

No one has yet started in the province from the sale of an early Canadian painting. Depending on who painted it, when it shows and how much showing, painting and showing a work, with a work only from two to ten days in the market, it's not a bad thing. Hoppe's gallery in Quebec City has just made the National Gallery a photograph of a painting the artist and Randall Hoppe, the gallery's director of Canadian art, says it is a masterpiece by Knapfield. Last November, Hoppe and his wife, Susan, showed artists, for one Knapfield, the second year for Canadian art, about one example of his work in words of that two thousand dollars.

Oliver Gagnier, a historian in Quebec, recently found a yellowed and broken picture among the papers in his basement. He brought it to Hoppe who identified it as a valuable watercolor in Blenheim, Ontario, painted in 1845 by R. C. Dodd. A dealer has nearly doubled Todd's price in the National Gallery. Gagnier showed the gallery would be worth the price and is now trying to sell the find for more money to private dealers. A Toronto art dealer, Bill Lutz, CONFIRMED ON PAGE 30

Remains of man and woman (right), pinned in Quebec about 1877 by an unidentified artist. Sharper with them: obviously *safer*. This is an example of the work, being done at the time by artists who wandered through the cemetery, passing them by their credit affect to all. One such artist, William Verelstede, spent his entire life, probably in and out of the house and chapel, in the 1870s.

(poodle family (sketch), painted by Willem van Moll) Boreas in 1989. On the back of the poodle sits a label that reads: "Boreas Family, eight figures, painted for 4.00 each; dog breeds were added without cost. The painting was purchased in the National Gallery by Prince Philip, Duke of Edinburgh, a descendant, literally, of the house whose initials in gold have been a clue

A none of Niagara Falls, painted in the 1870s by Robert White, a painter who had emigrated from England when his childhood was affected by the burning out of the canneries. White made pointed signs like this one, here he used to say a small model—the 18th-century public, situated in nature Niagara Falls and so indicated progress and early first Canada Southern Rail was which can from Niagara Falls to Windsor.

## UNKNOWN ART TREASURES

M. mas. latius, joined on the north shore of New Brunswick. The carter, bought by the police in 1907, is one of the perfect-knives, as they have passed by the steel, but the blades is, and now, I have the paper with this in my photograph portfolio. The steel has a gold-colored, but on the surface of the blades

The ice case, or *Wunderberg Fels* (now *WFF*) named in 1945 by Robert F. Todd at Queen City airport, lies across a tundra in a pasture at a farm. Todd used the name *Wunderberg* for parking along horses, so it is assumed the ice case Todd used the WFF. The latter is probably correct, as was listed in the *Glacier* book. The former was picked up by the author in 1977 from a *Forbes* article. The title below is a *Wunderberg* (ice case) and *WFF* (ice case).

# MONTREAL'S IMPECCABLE HOME FOR THE WELL-TO-DO

The Chateau is a private world of apartment-dwellers who are so distinguished they rarely even speak to each other

BY KEN JOHNSTONE

PHOTOGRAPHS BY LEO TESS

FROM THE northwestern corner of Sherbrooke and Mountain streets, in central Montreal, an eleven-story latter-day chateau rises like a Walt Disney vision.

It has walls faced with buff Tyndale forested limestone, imported from Wisconsin; doorways rich in ornamentation; balconies adorned with leafing grappolas. It is known, in circles that make it their business to know such things, as *The Chateau*.

To builders describe it as "in the style of *Françoise I*" (c.1540). In fact, it is in the style of Montreal architect Ross and Macdonald with H. L. Fetherstonhaugh (c.1926).

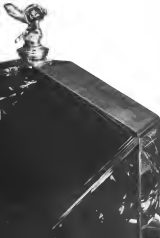

But what it lacks in antiquity it makes up in interior, and 130 pleased families call it home. Two uniformed doormen, chosen for their bulk and loyalty, guard the vaulted archways leading from Sherbrooke into the courtyard. A third waits the main entrance.

Peering children, peering upward at, in turn, the doorman's embossed coat, the

**Dads who know the whole story  
get the life insurance with bigger returns**

Wouldn't you like to be many hundreds of dollars ahead — when the need for family protection has passed and your life insurance turns into cash or retirement income? Your Mutual Life of Canada policy can bring you much bigger returns, return far in excess of your actual premium payments.

The reason is the savings which arise from the big dividends you get from the Mutual. The Mutual Life Assurance Company of Canada has an outstanding

dividend record. Yarey Dividends are substantial and when left to accumulate at interest they provide a very attractive investment. The attainment index of a Mutual Life policy-plus-dividends is one of the most impressive indices in Canadian life insurance.

Why not get the story on how you, personally, can benefit? The Mutual Life of Canada representative in your community is at your service, or write to the Head Office, Waterloo, Ontario.

## This "Hot Test" helps put the smoothest running V-8 engines under the hood

A newborn Ford-built engine comes to life. The big V-8 coughs, clears its throat and settles down to tick over the revolutions in a businesslike baritone murmur. The scene is Ford of Canada's Windsor Engine Plant. The quality control operation is the engine "Hot Test."

*Every newly assembled Ford-built engine is run under its own power before it is installed in a car.*

Why this "Hot Test"? Running an engine under its own power is the best way to check the lubrication system, valve action, compression, coolant passages, and overall performance. A most important part of the "Hot Test" is the electronic balancing of V-8 engines. The engine is dynamically balanced by means of super-accurate electronic equipment. This helps put the smoothest

running V-8 engine under the hood of your Ford-built car.

All the precision measurements and quality control checks—and there are hundreds—are no substitute for actually operating an engine under its own power. It takes more time, it takes more men, it takes more equipment to "Hot Test" engines. The result is worth it.

Ford is the world's most experienced builder of V-8 engines. In 6-cylinder engines too, Ford pioneered the modern Short-Stroke design that reduces friction and increases engine life. V-8 or Six, Ford-built is well-built. The same thing applies to every component of the car and to every assembly operation.

The Ford-built idea is aimed to bring you the

quality never before believed possible in mass-produced automobiles. The evidence is at your Ford of Canada Dealer's. And he's prepared to see that your new Ford-built car will give you complete satisfaction.
